- CLAIM LISTING -

Claims 1-27 are currently pending in the application. Please add claims 28-32 such that a complete listing of the pending claims reads as follows:

1. (Original) A method for vehicle preference selection monitoring comprising:
 - initiating communication between a mobile communication unit and a base station, wherein communication is performed within a mobile vehicle communication system;
 - requesting at least one vehicle preference setting from the mobile communication unit;
 - receiving the vehicle preference setting request at the mobile communication unit;
 - determining vehicle preference setting for the mobile communication unit;
 - transmitting to the base station the vehicle preference setting from the mobile communication unit; and
 - receiving the vehicle preference data at the base station.
2. (Original) The method of claim 1 wherein the vehicle preference setting includes a satellite radio receiver preference setting.
3. (Original) The method of claim 1 wherein the base station is a call center.
4. (Original) The method of claim 1 wherein the base station is a third party.
5. (Original) The method of claim 1 wherein the vehicle preference setting is requested by the mobile communication unit.

6. (Original) The method of claim 1 wherein the vehicle preference setting is determined by a module.
7. (Original) The method of claim 1 wherein the vehicle preference setting is determined from a memory.
8. (Original) The method of claim 1 further comprising appending at least one vehicle attribute to the vehicle preference setting.
9. (Original) The method of claim 1 further comprising appending at least one system diagnostic to the vehicle preference setting.
10. (Original) The method of claim 1 further comprising appending at least one vehicle default setting to the vehicle preference setting.
11. (Original) The method of claim 1 further comprising appending at least one user identifier to the vehicle preference setting.
12. (Original) The method of claim 1 further comprising appending subscriber information to the vehicle preference setting.
13. (Original) The method of claim 1 further comprising storing the received vehicle preference setting in a database.

14. (Original) A system for vehicle preference selection monitoring comprising:
- means for initiating communication between a mobile communication unit and a base station, wherein communication is performed within a mobile vehicle communication system;
 - means for requesting at least one vehicle preference setting from the mobile communication unit;
 - means for receiving the vehicle preference setting request at the mobile communication unit;
 - means for determining vehicle preference setting for the mobile communication unit;
 - means for transmitting to the base station the vehicle preference setting from the mobile communication unit; and
 - means for receiving the vehicle preference data at the base station.
15. (Original) The system of claim 14 further comprising means for appending at least one vehicle attribute to the vehicle preference setting.
16. (Original) The system of claim 14 further comprising means for appending at least one system diagnostic to the vehicle preference setting.
17. (Original) The system of claim 14 further comprising means for appending at least one vehicle default setting to the vehicle preference setting.
18. (Original) The system of claim 14 further comprising means for appending at least one user identifier to the vehicle preference setting.
19. (Original) The system of claim 14 further comprising means for appending subscriber information to the vehicle preference setting.
20. (Original) The system of claim 14 further comprising means for storing the received vehicle preference setting in a database.

21. (Original) A computer readable medium storing a computer program comprising:
- computer readable code for initiating communication between a mobile communication unit and a base station, wherein communication is performed within a mobile vehicle communication system;
 - computer readable code for requesting at least one vehicle preference setting from the mobile communication unit;
 - computer readable code for receiving the vehicle preference setting request at the mobile communication unit;
 - computer readable code for determining vehicle preference setting for the mobile communication unit;
 - computer readable code for transmitting to the base station the vehicle preference setting from the mobile communication unit; and
 - computer readable code for receiving the vehicle preference data at the base station.
22. (Original) The computer readable medium of claim 21 further comprising computer readable code for appending at least one vehicle attribute to the vehicle preference setting.
23. (Original) The computer readable medium of claim 21 further comprising computer readable code for appending at least one system diagnostic to the vehicle preference setting.
24. (Original) The computer readable medium of claim 21 further comprising computer readable code for appending at least one vehicle default setting to the vehicle preference setting.
25. (Original) The computer readable medium of claim 21 further comprising computer readable code for appending at least one user identifier to the vehicle preference setting.

26. (Original) The computer readable medium of claim 21 further comprising computer readable code for appending subscriber information to the vehicle preference setting.

27. (Original) The computer readable medium of claim 21 further comprising computer readable code for storing the received vehicle preference setting in a database.

28 (New) A method for monitoring vehicle preference selection, the method comprising:
requesting user defined configurations from at least one vehicle using a wireless connection between a call center and the at least one vehicle;
receiving the user defined configurations from the vehicle at the call center; and
analyzing the received user defined configurations.

29. (New) The method of claim 28 further comprising appending at least one vehicle attribute to the user defined configurations.

30. (New) The method of claim 28 further comprising at least one system diagnostic to the user defined configurations.

31. (New) The method of claim 28 further comprising appending at least one user identifier to the user defined configuration.

32. (New) The method of claim 28 wherein the user defined configuration comprises a radio station setting.
